

---

The "Virtual School" project will be launched by the Ministry of Education on April 2.

The project aims to ensure interactivity of the television lessons broadcast by the Ministry of Education and to increase the opportunities for distance teaching in general.

The "Virtual School" project is being implemented within the framework of cooperation between the Ministry of Education and "Microsoft" corporation. Each pupil, having registered on the "Virtual School" portal, will be assigned to a class corresponding to his or her age, where he or she will perform homework prepared by teachers in accordance with the topics which are taught on weekly TV lessons. New tasks on various topics and subjects will be added to the portal every week.

At the same time, the portal will provide an opportunity for online lessons for teachers. The students will be able to use the "Chat" function to communicate with their peers through video and audio.

It should be noted that there is also a mobile version for the portal "Virtual School". To use it, students must download the "Microsoft Teams" application from the AppStore and Google Play markets and register on the portal with a username and personal password.

Instructions on the "Virtual School" project are provided:
