
President of the Republic of Azerbaijan Ilham Aliyev has viewed conditions created at secondary school 35, the new premises of which were built in Nasimi district, Baku.

Head of the Baku City Executive Authority Eldar Azizov informed the head of state of the conditions created at the school.

The secondary school 35, which has been in operation since 1931, has been completely rebuilt. The old building of the educational institution built in 1931-1935 was demolished, and a new one was built instead. A total of 24 classrooms, computer, labor, military training, foreign language, music, drawing, medical, physics, chemistry and biology laboratories, a library, a cafeteria and a conference hall have been established in the new school building for a total of 888 students. The total area of the four-story building is 5,454 square meters.

President Ilham Aliyev viewed the military training room, the eco-class, biology, computer and drawing classrooms, the cafeteria, and the labor and physics rooms of the new school building.

Adapting the operation of educational institutions and curricula to modern challenges and building the personnel capacity suitable for the modern labor market are among the state's top priorities. The construction and commissioning of modern schools and the restoration and reconstruction of educational institutions are also part of this process. The Heydar Aliyev Foundation continuously supports this strategy by implementing the "A new school for a renewing Azerbaijan" project launched in 2005.

The progress and future of every country hinge on its level of education. Investment in this area means an investment in the future. Azerbaijan is among the leading countries worldwide in this respect. No other country has built or rebuilt such a significant number of schools in such a short time. One of the critical features of this process is that newly created and renovated educational institutions are provided with the most modern educational equipment.
