

---

"The RoboGames 2022" STEAM competition, organized by the Ministry of Science and Education, ADA University, and "Mars Academy", was held on December 24–25.

"RoboGames 2022: Smart City" is a local robotics project competition, organized for the first time for high school students aged 10 to 16. "RoboGames" is an unusual experience that introduces students to real-world scientific and technological problems in a fun environment and enriches students' worldview by exploring their solutions.

The competition was held over 2 days at ADA University with 40 teams, 201 participants, and team leaders from public and private educational institutions. The teams assembled robots programmed to solve the stated "Smart City" missions using special "Lego Mindstorms ev3" kits, and demonstrated creativity by using more efficient resources with digital solutions.

On the last day of the event, the teams that demonstrated the importance of new discoveries, fair competition, teamwork, professionalism, cooperation, and friendly competition were chosen as winners.

At the end of the event, Vusak Khanlarov, head of the Department of Informatization of the Education System, and Sencer Yeralan, dean of the Faculty of Information Technology and Engineering at ADA University, presented trophies and gifts to the champions.
