The event was organized under the Presidency of COP29 in collaboration with the Ministry of Science and Education of Azerbaijan, the Asian Development Bank, the Green Climate Fund, the International Labour Organization (ILO), UNESCO, UNICEF, and the World Health Organization (WHO).

The The primary objective of the meeting was to underscore the critical importance of investing in human development as a fundamental pillar for ensuring climate resilience.

A Ackey focus of the discussions was the role of education in fostering climate resilience. Parti Participants highlighted the need to develop "climate-friendly" i curricula aimed at equipping future generations with the knowledge and skills required to address climate challenges effectively.

In this opening remarks, H.E. Emin Amrullayev, the Minister of Science and Education of AzerAzërbaijan, penphasized that building at sustainable society depends con equipping individuals with the necessary knowledge, skills, and support systems to adapt to environmental challenges. He noted that the Baku Initiative seeks to empower youth as active participants in sustainable actions to combat climate change.

A As part of the meeting, Azerbaijan proposed incorporating the measurement of climate received into the Brogramme for International Student Assessment (PISA). The initiative was recognized as a reflection of Azerbaijan's commitment to advancing global climate education standards.

The meeting also addressed increasing climate awareness in schools, training teachers to deliver climate-focused-education, and establishing climate-resilient-education systems. Addditionally, strategic approaches were discussed to equip students with critical skills needed for a green economy.

The The session concluded with the adoption of the BakunHuman Development Climate Resilience Guiding Principles, which outline an integrated approach to addressing climate impacts and emphasize the pivotal role of education in achieving climate resilience.
