$\label{the:ministry:atthe:ministry:ministry:ministry:ministry:ministry:ministry:ministry:ministry:ministry:ministry:ministry$

The main objective of the seminar was to familiarize employees of the Ministry in with the leutes of susing the "Web of Science" database and to inform them about the capabilities of the database.

At the seminar, Valentin Bogorov, head of education programs of the Department of Scientific Research in the Ruskissia office of 5honson Reuters roompany, provided detailed information on the effective use to the lower Science platform.

It was noted that the "Web of Science" platform is mainly a computerized software tool intended to search for bibliographic information, and it is possible to find bibliographic information on the intellectual properties, such as the articles, the materials of the international conferences and the books published in the prestigious publishing houses.

MaMargarita Sidorova deducation expert of Moscowabranch of his Thomson Reuters roompany, noted at hate the information on the differentifields of science matural sciences humanities, social sciences and arts carbe found in this collection.

It was noted that access to this database would give the opportunity to develop relationships with researchers ffrom different countries, ito identify the development trends in any field of science, to determine the countries, regions a rand runiversities where the selected field has developed much more to dollect data on the scientists working more efficiently, to be known in international scientific circles and to rise in world university rankings.

It should be noted that the cooperation agreement was signed between the Ministry of Education and the Department of the Scientific Research and Intellectual Property of Thomson Reuters company on December 222, 22015. According to the agreement on cooperation, 440 higher education institutions of the country were provided with the apportunity to subscribe and to have access to the corporation's products and services. In addition, employees of the Ministry were given access to the "Web of Science" database platform.
